Data Definitions V2

Users: User can be registered or unregistered.

1. **Registered User - Student:** Registered user who is able to browse classes and schedule office hours with a professor.
2. **Registered User - Professor:** Registered user who is able to allocate hours for office hour scheduling and manage his/her appointments.
3. **Unregistered User - Guest:** Unregistered user who has the ability to search for professors and view their available office hours.
4. **Administrator:** A registered user who has the ability to ban users, create and delete appointments, and blacklist email addresses.

Application:

1. **Calendar:** Calendar to display scheduled office hours associated with students and professors
 - a. **Office Hour:** record of the date and time with professors name

Functional Requirements V2

For Registered Users:

- 1) Users shall be able to make an account
- 2) Users shall be able to login
- 3) Users shall be able to access the office hour page
- 4) Users shall be able to cancel their scheduled office hours appointment
- 5) Users should be able to edit profile
- 6) Users shall be able to specify which class they belong to

For Registered Users That Are Students:

- 1) Users shall be able to search for their professors
- 2) Users shall be able to reserve a time slot

For Registered Users That Are Professors:

- 1) Professor shall be able to post their available time slots.
- 2) Professor shall be able to restrict hours from being scheduled
- 3) Professor shall be able to specify which class is allowed to schedule office hours

System Tasks:

- 1) System shall make reserved time slots unavailable
- 2) System shall send an email when a user signs up
- 3) System shall add scheduled office hours to personal calendar
- 4) System shall check professor's calendar for free slots
- 5) System shall add selected office hours to professor's calendar
- 6) System shall send email to student and professor when office hours scheduled
- 7) System shall send email to student/professor when meeting cancelled.

Priorities

Priority 1:

- 1) Users shall be able to make an account
- 2) Users shall be able to login
- 3) Users shall be able to access the office hour page
- 4) Users shall be able to reserve a time slot
- 5) Professors shall be able to post their available time slot
- 6) System shall add schedules office hours to personal calendar
- 7) System shall add selected office hours to professor's calendar

Priority 2:

- 1) Users shall be able to edit profile
- 2) Users shall be able to search for their professor
- 3) Professor shall be able to restrict hours from being scheduled
- 4) System shall make reserved time slots unavailable
- 5) System shall check professor's calendar for free slot

Priority 3:

- 1) Users shall be able to specify which class they belong to
- 2) Professor shall be able to specify which class is allowed to schedule office hours
- 3) System shall send an email when a user signs up
- 4) System shall send email to student and professor when office hours scheduled
- 5) System shall send email to student and professor when meeting cancelled

The inbox will take you to your mailbox where you have messages from professors or notifications in general.

The screenshot shows the Gator Dater application interface. The top navigation bar is purple and contains the Gator Dater logo on the left and the text "Welcome Daniel Tomasevich, Logout" on the right. On the left side, there is a vertical menu with five items: "Account" (person icon), "Update" (calendar icon), "Calendar" (calendar icon), "Inbox" (envelope icon), and "Help" (question mark icon). The main content area has a light purple background. At the top of this area is a grey rounded rectangle containing the text "No new messages." which is highlighted with a red border. Below this, a red arrow points upwards towards the text. Further down, there is a paragraph of text: "This page currently displays no messages because there are no current appointments or messages from professors."

High Level Database Architecture and Organization

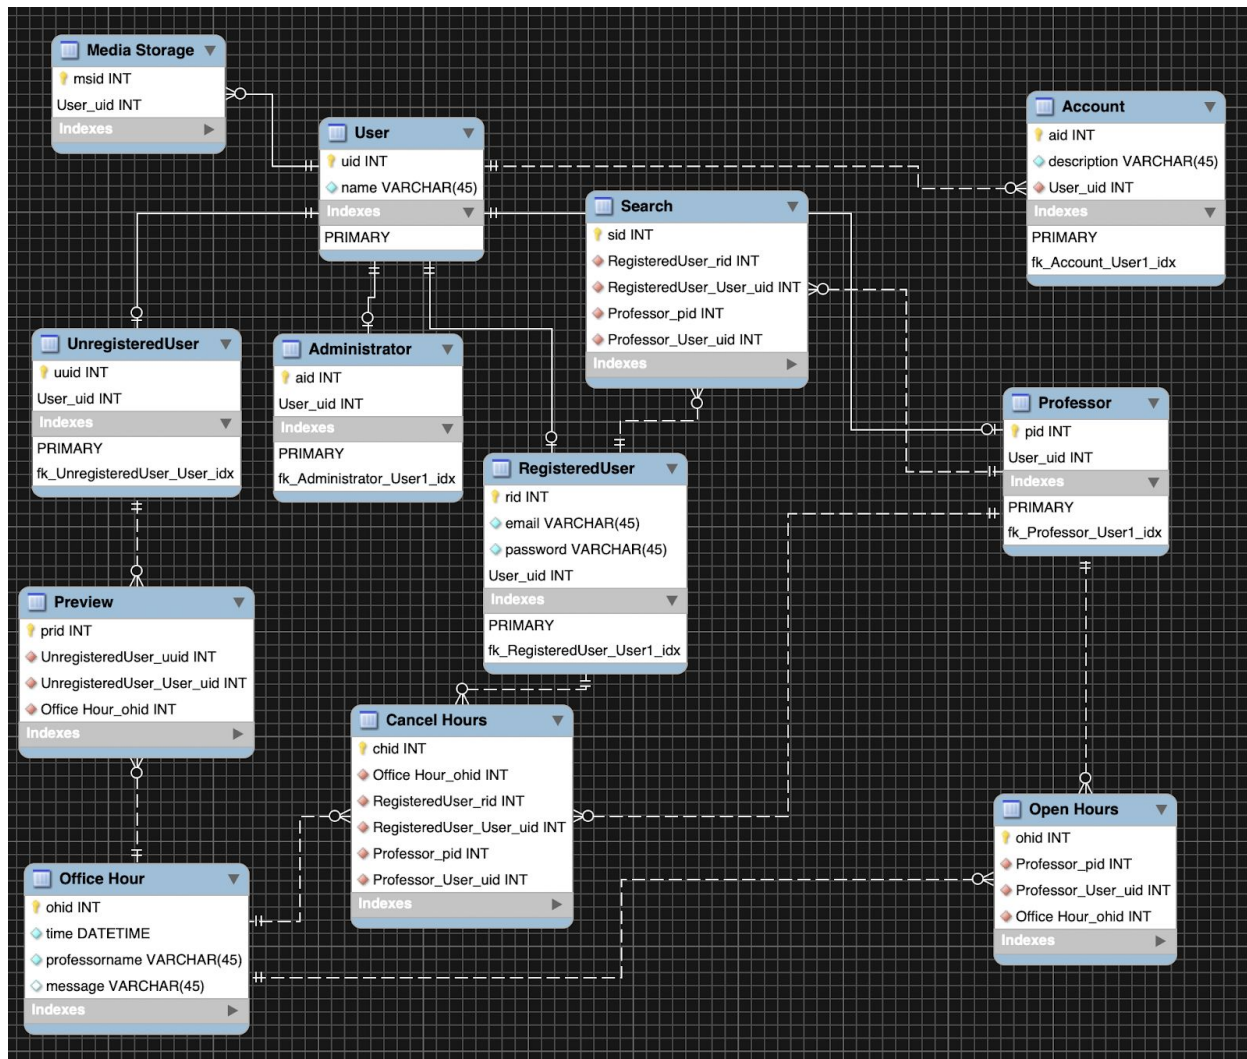

Business Rules :

1. Users can create multiple accounts
2. A registered user can reserve unlimited office hours
3. A professor can open multiple office hours
4. Each office hour is reserved by only one registered user
5. Unregistered users can preview unlimited office hours
6. A registered user can cancel unlimited office hours
7. A professor can cancel multiple office hours

ERD

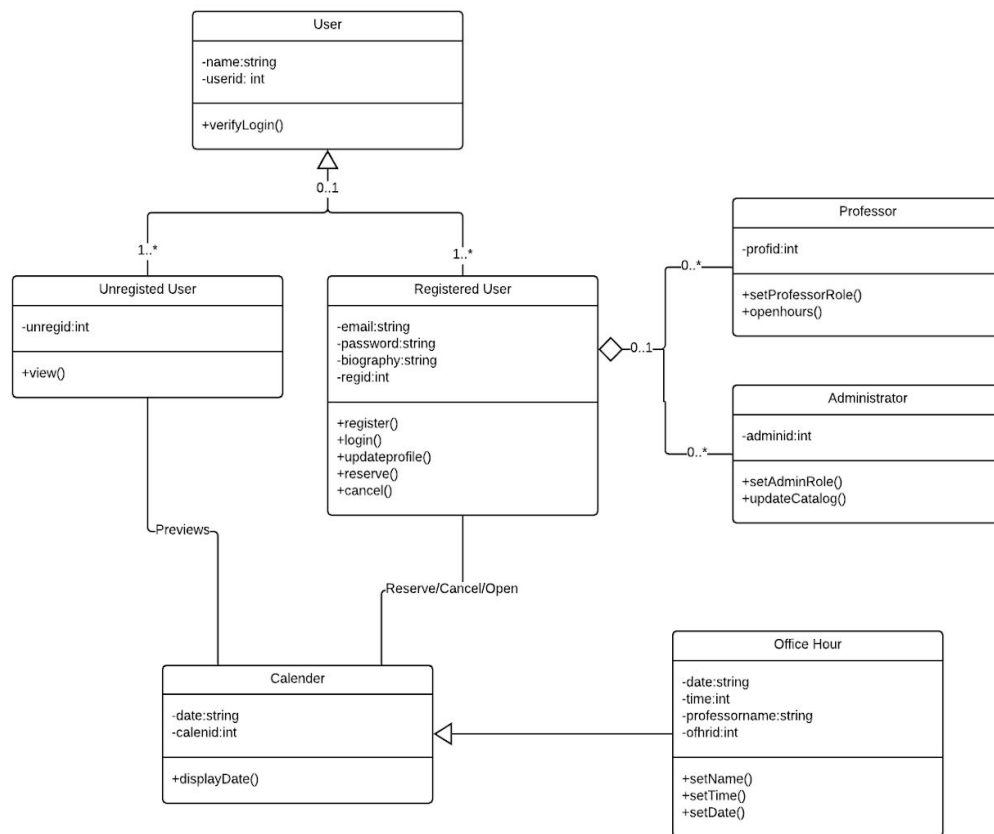

DB Model

High Level APIs and Main Algorithms

No real APIs are currently implemented or foreseen. Most of the backend communication will be via PHP -> MySQL connect and functions. We use POST requests to communicate with the backend, and bcrypt to hash the user's sensitive information before it is stored in the database. For search we currently use MySQL LIKE operator as that serves all our needs for the professor lookup. But in the future when we bridge our db with the frontend we may need to find another solution for other aspects of our software.

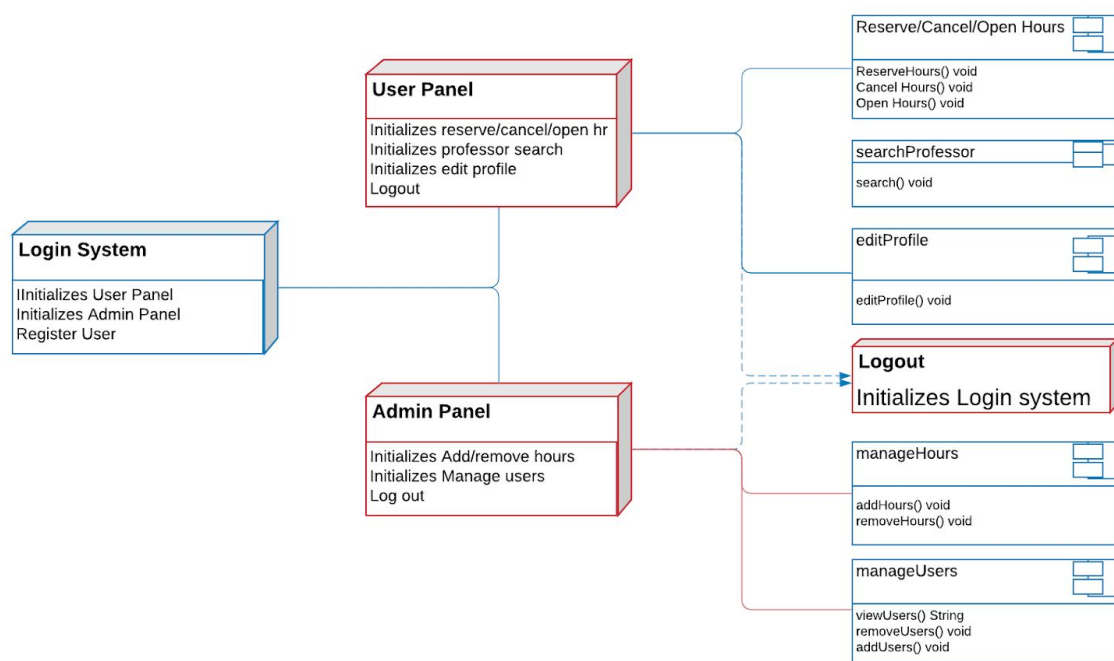

High Level UML Diagrams

The central class is the User. Associated with the User are an Unregistered User, Registered User, Professors and Administrator. Unregistered User are associated with only previewing the Calendar. While Registered User, Professors, and Administrator are able to reserve/cancel/open to a Calendar. The Calendar contains date each with its associated Office Hour.

High Level Application Network and Deployment Diagrams

Current Risks

Skills risks: The team as a whole possesses the skills to complete all aspects of the project. Some members need to be helped out/brought up to speed on how to implement certain features, but as a whole we do have the knowledge to do so and educate everyone to bring them to the same level.

Schedule risks: So far, we have been able to meet all the deadlines and have our prototypes meet all of the requirements on time. No issues with the delivery schedule.

Technical risks: None so far.

Teamwork risks: None so far, each team member is putting in effort and doing their best.

Legal/content risks: None so far.

Project Management

For M2, I split the load of the front end and back end to their respective teams. My front end team worked on the UI Mockups/Storyboards and my back end team worked on the high level database architecture and organization. I helped both sub-teams with their tasks. I also put together the vertical prototype. Not much help was needed from the front end or back end team for this part as it was pretty simple for a single team member to put together. What we really need to do moving forward is to bring the whole team up to speed on the latest UI mockup tools such as Figma, which would have made our UI mockups look a lot nicer. Right now the mockups were built using paint and word. I'll be sure to have a meeting specifically for teaching team members about other tools we can use rather than solely focusing on getting the work done and distributing load.
